Project Name	Credit Card Approval Prediction
Maximum Marks	2 Marks

Customer Problem Statement Template:

Banks and financial institutions receive thousands of credit card applications every day. Manual evaluation of these applications is time-consuming, expensive, and prone to human error. Incorrect approval decisions can lead to financial losses, while rejecting eligible applicants can reduce customer satisfaction and business growth. There is a need for an intelligent, data-driven system that can automatically analyze applicant information such as income, employment status, education, and credit history to accurately predict credit card approval decisions. The proposed Credit Card Approval Prediction System leverages machine learning algorithms to automate the screening process, improve decision accuracy, reduce processing time, and support both banking professionals and customers with faster and more reliable credit assessment.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Bank Credit Analyst	Process and approve credit card applications quickly and accurately	I spend a significant amount of time reviewing each applicant's financial details manually	Thousands of applications are received every month, and each requires careful risk assessment	Overwhelmed and concerned about making incorrect decisions
PS-2	A Credit Card Applicant	Determine whether I am eligible for a credit card before applying	I often receive application rejections without	Traditional application processes do not provide instant eligibility	Frustrated and uncertain about my financial standing

			understa nding the reasons	assessmen t or feedback
